MULTICAST

*Multicast is communication
between a single sender
and multiple receivers on a network*

- Multicast takes advantage of the wide reach of satellites to send the same data to multiple receivers simultaneously e.g. e-health, e-learning, digital signage and video streaming.
- Use with or without return channel (mobile network, Ethernet). Combined with internet access it is powerful and affordable.
- Forsway's routers will receive and store the information whether connected to the internet or not. The stored content can be accessed with built-in Wi-Fi or Ethernet.
- Secure and reliable transmission of files over satellite. Encryption of data in transit.
- Includes templates for client web applications that makes it possible to build new highly customized applications in a short time.
